

# FileSync

Easily Sync Files From Google Drive to IPFS

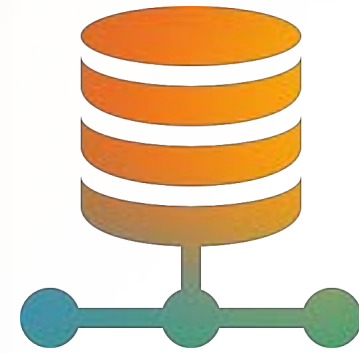

# Introduction

**FileSync** is a tool for users to transfer their files from Google Drive to IPFS easily. The whole process is easy to use compare to other products, users just need to click the files and choose to upload them to IPFS, and then close the window.

**FileSync** uses IPFS to store the user's files. We provide:

- Easy-to-use UI to complete the uploading process.
- Resume your files any time.
- Various plans of different capacity supporting permanent storage.

# What are Users' Pain Points using Google Drive?

Limited storage space

High storage costs  
and subscription fees

Users' privacy is  
not fully protected

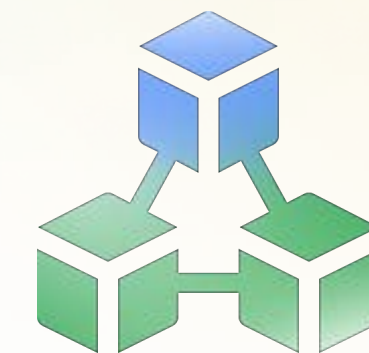

Casual content censorship  
by big tech companies

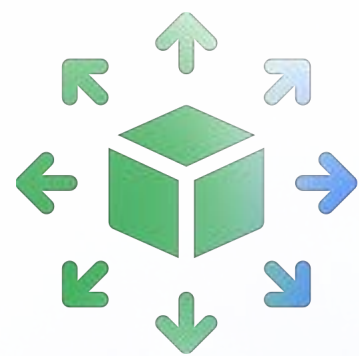

# Why should you use FileSync?

Affordable  
storage fees

Permanent storage  
of files

Decentralized storage  
censorship resistance

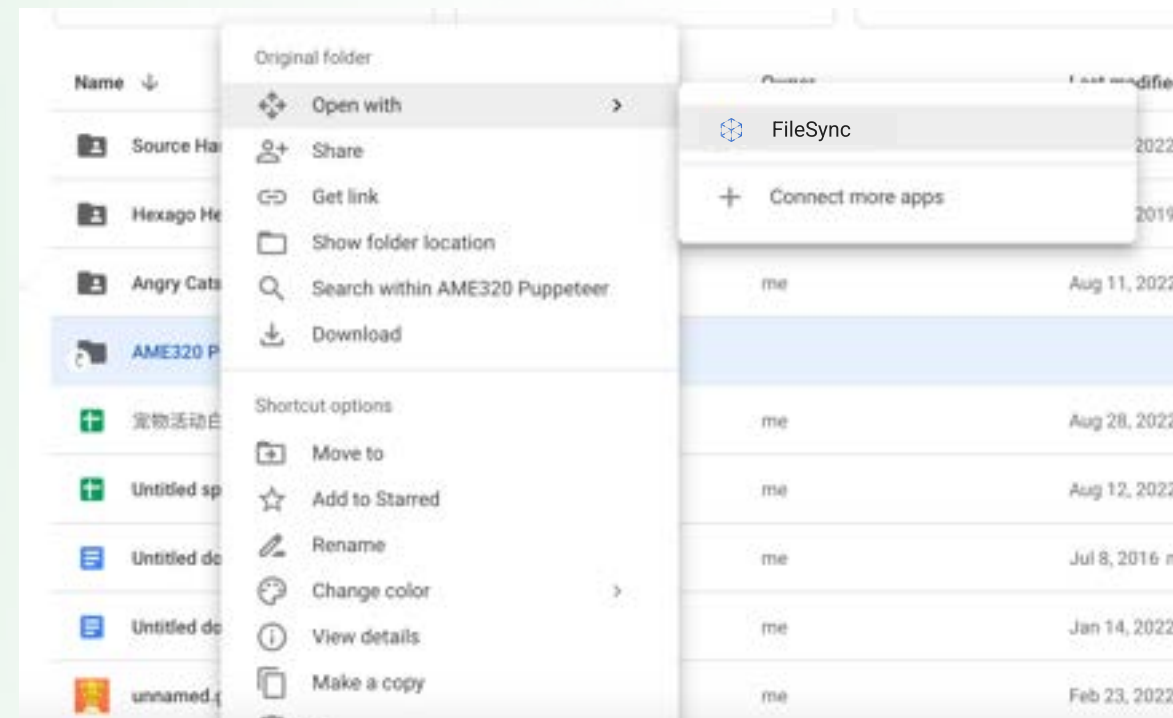

Sync your files  
with just few clicks

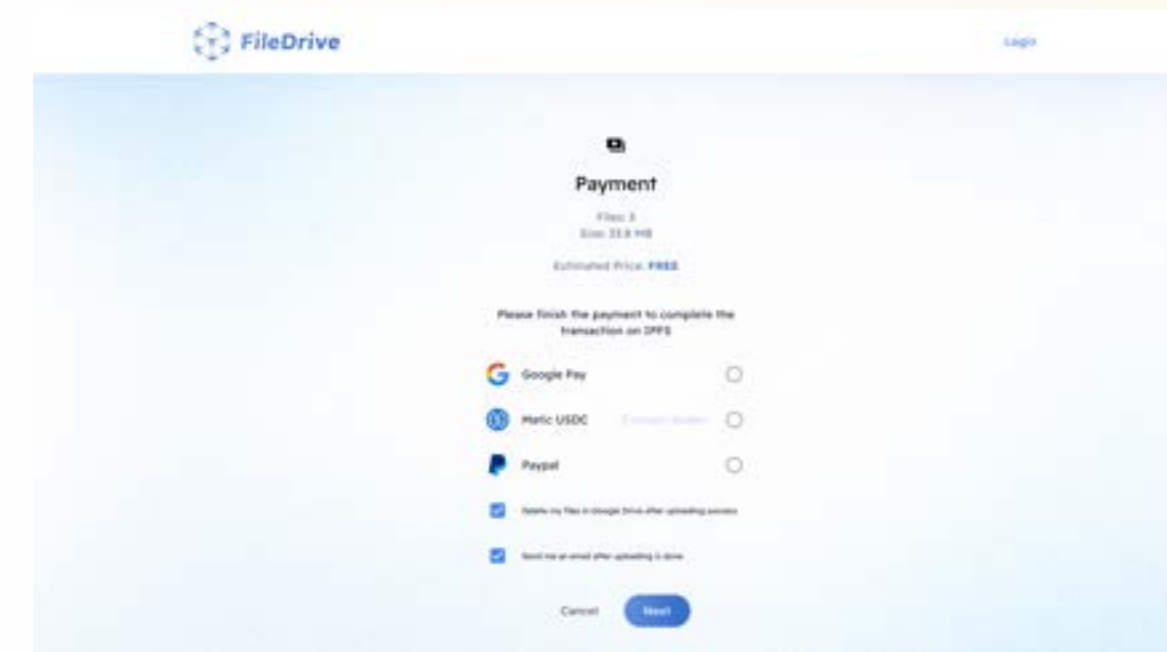

User-friendly to  
non-crypto population

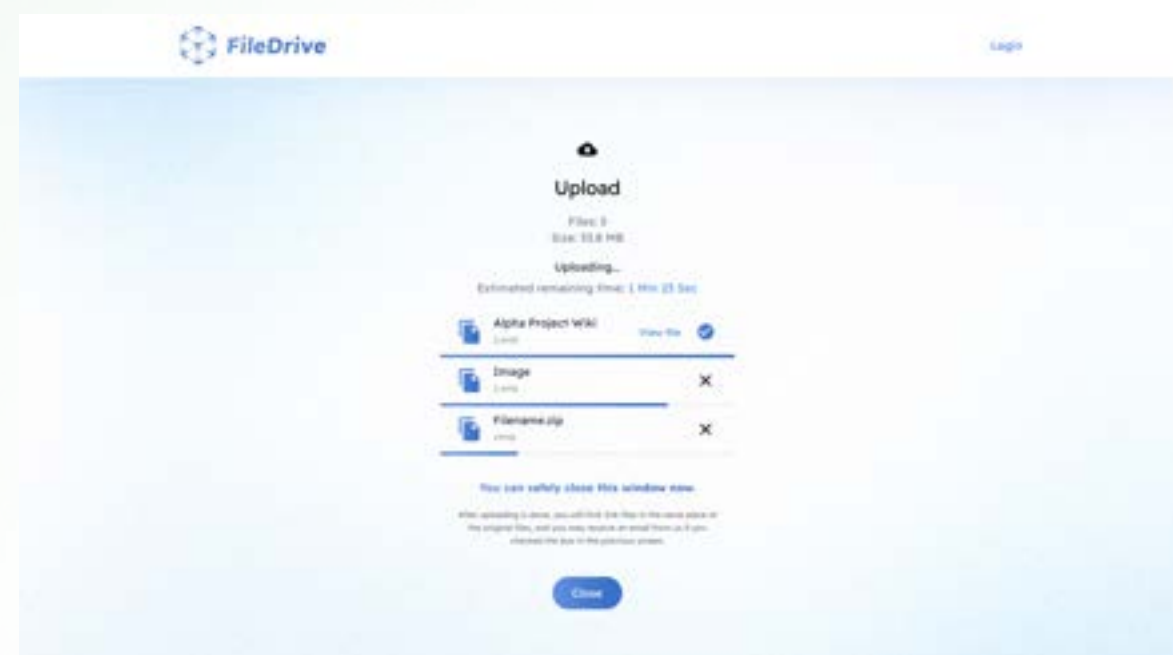

# Product flow demonstration

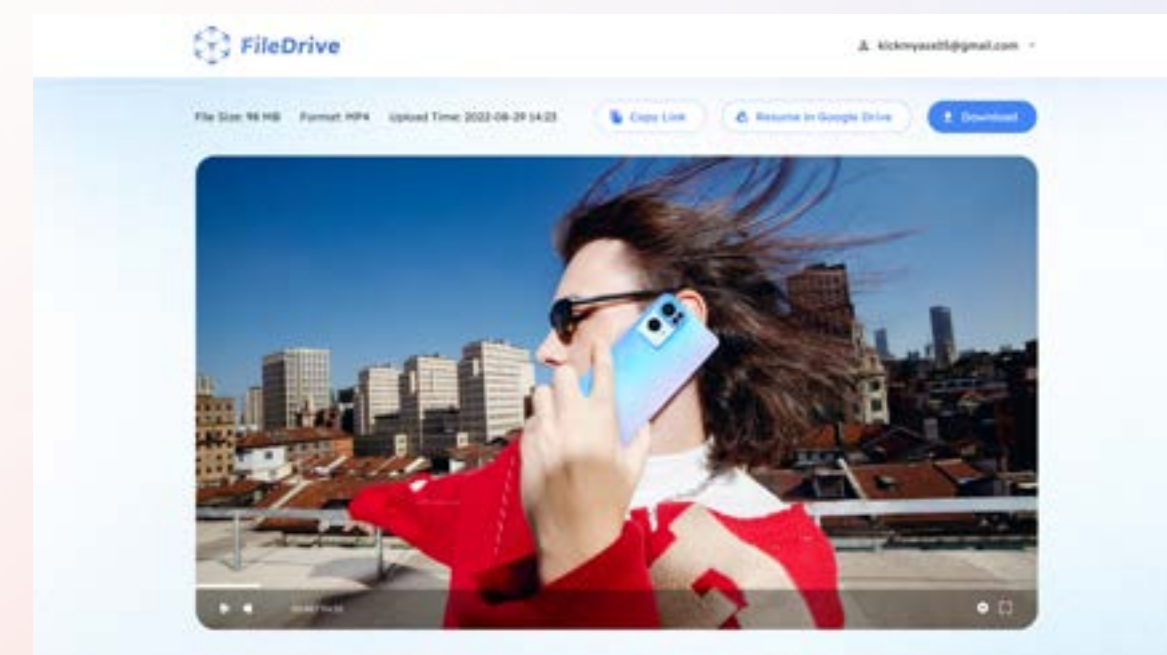

1-Choose Files From Google Drive

2-Pay Storage Fees

3-Upload to IPFS

4-Functions to deal with your file
